

PERFORM

TECHNICAL DATA

DESCRIPTION:

PERFORM (item code ADC101) is a green fuel conditioner compounded from pure petroleum products and derivatives. This product is recommended for gasoline and diesel fuel (#1 and 2), propane and natural gas engines. **PERFORM** does not contain methanol alcohol, which will damage or bring about early failure of internal carburetors, injector pumps or other vital engine parts.

This product was developed in a research laboratory and has been field proven for many years. Because it is compounded from pure petroleum products and derivatives, it is classified as a fuel conditioner, not a fuel additive; therefore, **PERFORM** becomes an integral part of the fuel and will not separate.

PERFORM can be used as a fuel conditioner and penetrating oil. As a fuel conditioner, mix 1 gallon to every 200 gallons of fuel. If the fuel is natural gas or propane, it is recommended that a drip oiler or vaporizer be attached to the carburetor or intake manifold to disperse the product in proper amounts.

In addition, **PERFORM** can also be used as a flushing agent for internal combustion engines, hydraulic systems, air compressors and enclosed gear boxes. It should be mixed 50:50 with new oil, whether it is for a gear box, compressor, engine or hydraulic system, and run under a no load condition for approximately 30 minutes to one hour, depending on the equipment. The sump should then be drained and filled with new **ADMAX** lubricants.

USES

- Automobiles (trucks, industrial, off- or over-the-road)
- Buses
- Tractors and farm equipment
- Railroad engines
- Commercial equipment
- Hydraulic systems
- Fork lifts
- Air compressors
- Mining equipment
- Stationary and marine engines
- Recreational vehicles
